This note presents information about the Company's exposure to each of the above risks, the Company's objectives, policies and processes for measuring and managing risk, and the Company's management of capital. The Company employs risk management strategies and policies to ensure that any exposure to risk is in compliance with the Company's business objectives and risk tolerance levels. While the Board of Directors has the overall responsibility for the Company's risk management framework, the Company's management has the responsibility to administer and monitor these risks.

### b) Fair value of financial instruments

The fair values of cash, other receivables (excluding GST), and accounts payable and accrued liabilities approximate their carrying values due to the short-term maturity of these instruments.

The significance of inputs used in making fair value measurements are examined and classified according to a fair value hierarchy. The levels of the fair value hierarchy are as follows:

Level 1: Quoted prices (unadjusted) in active markets for identical assets or liabilities;

Level 2: Inputs other than quoted prices included within Level 1 that are observable for the asset or liability, either directly or indirectly;

Level 3: Inputs for assets or liabilities that are not based on observable market data.

c) Credit risk

Credit risk is the risk of financial loss to the Company if a customer or counterparty to a financial instrument fails to meet its contractual obligations.

The financial instruments that potentially subject the Company to a significant concentration of credit risk consist of cash and other receivables (excluding GST). The Company mitigates its exposure to credit loss associated with cash by placing its cash in a major financial institution. To reduce credit risk, the Company regularly reviews the collectability of other receivables (excluding GST).
